

Flowchart for Minimum Wage + Job Growth Interactive

Main page
All countries listed, all values plotted in gray. Will show user the extent of the data that's possible to visualize.

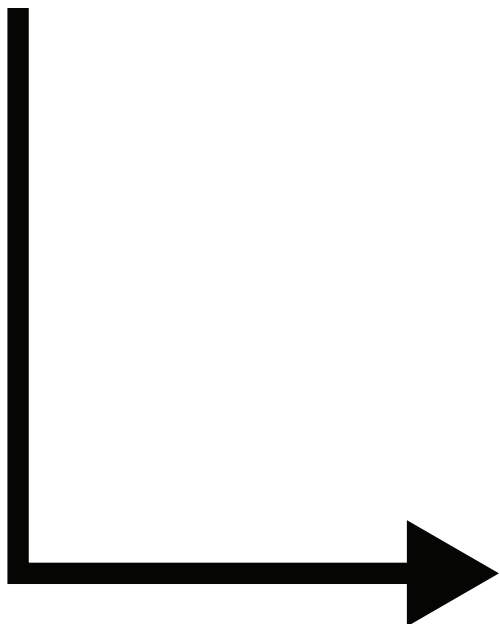

If user chooses regions
The countries belonging to that region/area/continent would turn to bold, while the selected nations would remain gray (secondary). The values for the chosen countries would be displayed in the charts, and a summary would be listed below the chart for each country. An OECD average would remain regardless of region selected for easier baseline comparison.

If user chooses two countries
The selected countries would turn to bold, while the selected nations would remain gray (secondary). The values for the chosen countries would be displayed in the charts, and a summary would be listed below the chart for each country. An OECD average would remain regardless of region selected for easier baseline comparison.

Additional detail
If a user hovers over a particular country's line in *either* category, the values would be displayed directly on the line for *each* category. The summaries would remain the same.

Additional detail
If a user hovers over a particular country's line in *either* category, the values would be displayed directly on the line for *each* category. The summaries would remain the same.

Reset
A "do another comparison" button would reset the page to its original state
